

MAMMOTH series

Washing and conservation

The Undersuit can be washed in a washing machine but **without spinning**.

Heat insulation used in a series of Narwhal, is Climashield Apex.

As the only insulation on the market, Climashield passed the test of at least 20 washes. An attempt was made on the undersuit and the sleeping bag filled with Climashield. The parameters and functionality remained at the same level.

The outer material is a membrane and it must be impregnated so that it would keep their properties. Therefore it is necessary to use special chemicals to clean the outdoor clothing while washing.

Remember! **Ordinary powder is destroying fabrics, from which the undersuit is made!**
